

◀ Retrofit Model

- Available in 2", 3" and 4".
- Designed to install over existing valve/piping at the facility.
- Eliminates normal "valve splitting" for installation.
- Cleanout nipple, valve and fittings included.
- Lockable security latch.
- Easy, efficient installation decreases overall labour install costs. Capability to install "hot".
- Easily removed when valve change-out is required.
- Ground bolt for connecting cables to address static electricity concerns.
- Black powder-coat paint finish for increased corrosion protection.
- Safe operating procedures included.
- Addresses concerns shared by Oil Producers, Governing Agencies and Environmental interests by: reducing hazardous substances contaminating soil and ground water and protecting wildlife from ingesting crude oil or becoming entrapped in catch containers.

Secure-Flow™ Spill Control Systems are an affordable, cost effective, environmentally friendly alternative to the loading procedures commonly used in the industry.
